MF-7200D Series

Development of environmentally considerate products

JUKI ECO PRODUCT certification system

JUKI applies a set of 38 strict environmental checkpoints through the various stages of the product life cycle to certify the environment-friendliness of its products.

Every product that clears these checkpoints is certified as a JUKI ECO PRODUCT.

Four checkpoints play an especially important role in the environmental performance of our products:

- Green procurement
- Power consumption during operation
- Power consumption during standby
- Consumption amount of oil and grease.

Every JUKI product must clear the target values for these checkpoints.

For more information about JUKI's environmental efforts, please visit our website at http://www.juki.co.jp/eco_e/index.html.
